I have the MDC remote and also the Cable co. remote both will do the same sound, also if I go to cable box channel up/down will make the same sound. But if I connect the cable box to the TV I don't have that sound. Also same cable box was hooked to Viewsonic decoder before so my son can see TV in his old PC which did not have MCE in and wasn't any problem. The previous monitor was also LCD.

Cable co came out and they didn't fix it.
