Of course, I meant "Component Video (YPrPb)"... :)

Also found some adapters/transcoders (eg.

<http://www.ramelectronics.net/html/kd-ctca2.htm>) but at US\$300 (plus shipping and customs tariffs) that is pretty steep considering I can get a 13" LCD TV for CDN\$500 ... if I can only convince my wife that this is desirable. :) So what I'm looking for is something cheaper.

> I would like to use the LCD monitor with the extender, but can't seem to find a way to connect them together. From what I can gather, what's missing is sync signals out of the extender so as far as I know, just a cable conversion wouldn't be enough. Perhaps some converter box could do the trick by providing the missing inputs? Anyone have any experience with this?
