I am trying to allow storage of passwords for accessing network shares so that I do not have to type the password in everytime I begin a new session. I go to the 'Control Panel -->User Accounts' and select the account (which is an Administrator) then I select on the left Panel 'Manage my network passwords' which brings up the stored usernames and passwords window. The problem is that there is no add button? I do not know if this feature has been disabled in Win XP Media Center like the ability to join a domain :-( has been disabled. Any ideas???

Regards,

Dave
