-

I use Nvidia GeForce 2 MX/MX 400 (64 Mb.) graphic card with Media Center Ed. Normally I haven't any problem when I work in XP platform, But when I run Media Center program computer works very slowly, it browses very slowly menus, and can't play sample movie file (in MC Ed. settings),

I use latest version of graphic card driver for Media Center Edition, (7.1.8.9)

How can I solve this problem,

Regards,

.
