I have only ONE user, Me. There are multiple user profiles , such as Owner, administrator, HP administrator and All Users but no passwords have ever been used and I have never switched etc.

Do you have multiple users enabled for your system. I beleive that when I ran the anti-virus and anti sypware that curred my problem that I was logged on as a different user than I normally log on as or maybe I logged on as the other user when the system booted and check disk ran and then did not run again after future boots as either user.

Did NOT work, I ran complete scans and it still does it.
I tried to do a Defrag on Drive D and it told me it was in use and to please
tun chkdsk f/
I went to the prompt and this is the message that I got.
"Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

```
C:\Documents and Settings\HP_Administrator>chkdsk /f
The type of the file system is NTFS.
Cannot lock current drive.
```

Chkdsk cannot run because the volume is in use by another

Re: Chkdsk autoruns

process. Would you like to schedule this volume to be checked the next time the system restarts? (Y/N)"

If I select YES! nothing changes.
How do I find out what is causing it?

I had the same problem and it went away after I did a complete anti-virus scan and a complete anti-spyware scan.

Every time I turn on my computer, chkdsk auto checks my second hard drive.
I have gone to PC Docotr and run a complete check of the drive and it is fine, I have looked at it in device manager abnd it says it is working properly.
How do I shut this autochecking off and how did it get turned on. I remeber in the days where you had MS-Dos i ue to run chkdsk but what has created it to do so in Windows XP multi-media Edition/
Thanks in advance for the help.
Oh! it is a Sata WD 250 gb and the primary is a sata as well and they are NOT hooked up as a RAID system just C, D, and another WD 250 GB as E, been working fine for about 8 months and

Re: Chkdsk autoruns

then it startiing autochecking

4

days ago. I even went to a restore point prior
to when it started and

it

still does. Must be a Toggle switch
somewhere J/K
