Does this happen with recorded TV, live TV, or only on other video files?
Does it happen with Media Center only, or Media Player too? Which video display adapter do you have, and which version of its drivers are installed?

Someone else posted a question about this, but there were no replies. I am having a problem with videos and my display. If I play a video, it automatically goes to full screen and I cannot minimize or even stop the video. In the end I have to reboot. Any help would be most welcome. Please...this is driving me nuts :(

Thanks in advance
