The simple way would be to just reinstall it from the CD's. If it came on a pre-built system, there is probably a recovery or restore CD (or program on the PC). These programs usually have an option to just restore applications (as opposed to the enter OS).

Don't know if this is the right place to ask this. One of my kids unintentionally uninstalled a favorite game -- one in the MVP Baseball series. I think he did it by clicking on the wrong selection when accessing the program through Start menu. Is there a way to recover the uninstalled program? What's the easiest way, if a solution exists? Thanks.
