I checked with someone more familiar with the MCdiag tool and they indicated that this message is generally only seen if the PC was windows XP rather than Media Center. Have you had any issues in the past where tools did not detect this as a MCE PC?

Hi Jenelle,

No it's not the 64bit version. I've tried running the installer straight from net and also copying to hard drive, still the same result.

Is your Media Center a 64 bit OS? Are you installing straight from the internet or coping the package local and launching?

The installer for MCE Diagnostics will not work for me. It ceases just before the end of installing with the following error:
"There is a problem with this Windows Installer Package. A program run as part of the setup did not finish as expected. Contact your personnel or

package vendor."

I have had the previous MCE Diag version installed and worked fine but

I uninstalled it a few months ago. Have I any other options ?

Stephen,

We will need to gather more data about your current PC config. Could

you

download the Windows XP Media Center Diagnostics Kit from

<https://www.microsoft.com/downloads/details.aspx?familyid=CE06D6A7-DE56-4D>

capture a machine snapshot using the

MCDiag tool, and send it to

msft_mcx

at

hotmail? (and then tell me once you've done this)
