Kim,

No you wouldn't, if would work just like a cable box, MCE would change the channel on the Sat box for you when it is time to make a recording. No need to do it manually.

Thanks Richard.

Of course you are right in that I can connect the satellite receiver to MCE, but the solution is not really usefull because I would have to come home and change satellite channel for every timed recording i wanted to make apart from the first.

Regards,
Kim

"Richard Miller" wrote:

Kim : There no MCE systems with built-in satellite, but you can still use your satellite box with MCE 2005. Run S-Video and the red and white audio RCA cables from the satellite box into an analog TV tuner in the MCE 2005 computer.

Thanks B-real.
What a pity though. I bet they could sell thousands in
Denmark alone.

Cheers,
Kim

"B-real" wrote:

I don't think you can use MCE with a
satellite receiver. Only cable
or
over-the-air signals.

I am looking into what
combination of home
entertainment system to
invest in
and would like to know if
there are MCE systems with
built-in
satellite
receivers on the market.
I have only been able to find
systems with one or two
regular
tuners which
does not help me because
my sole tv-source is a
satellite receiver.
