Thank you VERY much for your answer!

Okay, I asked my fiance (who has physical access to the machine, while I do not as of yet) to tell me a few things about it and here's what she said. It's a Dell Dimension 4600 (which my googling tells me should have one AGP slot). Further, she opened it and noted "several white slots" and "one green slot that looks a little different" at the top of the slot stack (nearest the CPU/memory, etc) so that tells me that it PROBABLY has AGP.

So where do I go from here knowing it *\*does\** have AGP?

.
