I'm strongly believe that comes from Windows upgrade issue, I hope they can find out what really caused the problem and fix it for All of us. thank you very much.

"mfb" wrote:

OK we all have the same problem. What is the fix for it? I didn't download anything so it must be an automatic upgrade that caused this. VIAO system with XP. Who is hte vendor supplier?

"Fange" wrote:

I have same issue with my Sony Vaio laptop after automatically upgraded. I'm wonder is that part of the upgrade which it checked out the system and them it tell you that your system is availuable to upgrade to Windows Vista, then after all, it caused this kind of problem? Do you All have this kind of upgrade? Please Help.

"akwoofie" wrote:

MS should TEST their updates before adding them to the automatic updates.
It's ridiculous to have to fix a problem that was created by microsoft.

"Ellen" wrote:

I have same problem, just started. I don't think I had an upgrade download. I had laptop off, turned on and get the ILlegal system dll relocation error

Re: RTHDCPL.EXE – Illegal System DLL Relocation

like everyone else. what is causing it and
how do we fix it?

"Madi" wrote:

I had the same problem too
– happened after the
upgrade. I have not done
anything to fix this yet –
there does not seem to be a
permanent fix.

I'm new to computers. Do I
not simply wait for a patch
which will come out
in the next upgrade? I would
think that this should come
out soon because
everyone is experiencing the
same problem.

Cheers
Madi

I'm also
having this
problem.
It's
definitely
the latest
upgrade, it
helped
for 10
minutews
before
Windows
Updated
and after the
reboot the
error was
immediately
back.

"JH513"
wrote:

Re: RTHDCPL.EXE – Illegal System DLL Relocation

I
agree
that
a
restore
solves
the
immediate
problem
–
but
then
soon
after
the
automatic
update
resets
the
problem
again.
Why
aren't
more
people
experienceing
the
same
problem??
More
importantly
–
what
is
the
fix?

"TexasGary"
wrote:

I
too
am
having
this
problem.
It
seems
from
the

Re: RTHDCPL.EXE – Illegal System DLL Relocation

previous
answers
that
a
roll
back
will
work,
but
that
seems
to
be
a
bandaid,
not
a
fix.
Any
suggestions
which
will
allow
updates
but
avoid
problems????

"perky"
wrote:

ok
i
am
having
this
same
problem
where
can
i
go
to
find
the
download
fix??

"chrism"
wrote:

I'm
wondering
what
to
do
now
after
running
the
hotfix.
Is
the
fix
a
replacement
for
the
bad
upgrade
or
is
it
a
prep
for
receiving
the
upgrade
correctly
into
my
system.

The
Hot
Fix
worked
but
as
mentioned
here,
I
am
still
showing
the
upgrade
icon
in

Re: RTHDCPL.EXE – Illegal System DLL Relocation

my
systray.
Do
I
click
on
it
again
after
installing
the
hotfix?

"SeanW"
wrote:

Hi
everyone,

I'm
having
a
similar
problem
that
started
just
today:

On
startup,
a
service
called
quickstart.exe
brings
up
the
Illegal
System
DLL
Relocation,
with
user32.dll
and
system32.dll
mentioned.

I've
also

Re: RTHDCPL.EXE – Illegal System DLL Relocation

been
using
File
Manager
carried
over
from
Windows
NT
on
my
XP
Pro
Service
Pack
2
machine,
and
it
too
is
affected
by
the
problem
–
neither
quickstart.exe
nor
winfile.exe
will
start.

I
traced
the
problem
to
an
errant
Windows
Update,
the
rolling
back
from
which,
via
System
Restore,
causes

the
problem
to
go
away.
A
System
Restore
Point
created
at
3:00
AM
today
mentions
"Software
Distribution
Service
2.0"
which
from
a
Google
search,
appears
to
have
a
history
of
problems.

Problem
is,
with
Automatic
Updates
in
the
equation,
the
unwanted
update
comes
back
into
play
very
quickly.
I've
turned

off
Auto
updates
but
the
Update
has
been
been
redownloaded
and
is
on
the
queue
to
be
installed
on
Turn
Off.

Obviously
I
don't
want
to
allow
that
–
could
someone
tell
me
how
to
kill
downloaded
updates?

Is
there
anything
else
I
can
do
to
make
sure
this
problem

Re: RTHDCPL.EXE – Illegal System DLL Relocation

doesn't
come
back?

"cmeden"
wrote:

thanks
it
worked
