What a great help your answer was to me. I did exactly what you told me to do and now my machine is working perfectly. Some of the downloads were corrupted(?) and I had to delete them and retry a couple of times, but I eventually got it. My wife thinks I'm a brain, but we all know it was you. I'll say a special prayer for you tonight.

I have a Sony Vaio computer PCV RS-310, which had XP Home. I had XP Professional installed; it worked OK but was slow. I was advised to get a new hard drive which I just installed. When I put Windows back in it, I can't change the display settings. Under System Tools, nothing is listed for

Re: Can't change display settings

display. Under Display Properties,Settings, the screen resolution is 640x480 pixels and the color is at lowest, 4 bit. Nothing I do will change these settings. I have gone to Sony for their downloads but they will not work. Sony tells me my computer is not set up for XP Professional; so how come it worked on the old hard drive? I can't use or even install my printer because the settings are so low. HELP, please.

Home support for PCV RS-310

http://esupport.sony.com/US/perl/model-home.pl?mdl=PCVRS310®ion_id=1

You need to install the original motherboard drivers. (You may read Windows

XP Clean Install: in the yellow box on this page).

<http://esupport.sony.com/US/perl/swu-list.pl?mdl=PCVRS310&UpdateType=Original>

You need:

Realtek AC97 Audio Device Driver

Intel i865 Chipset Driver

Realtek RTL8139 Ethernet Controller Driver

Intel 8245G/8265G Graphics Controller Driver.

Maybe this driver if you are using the original Sony Monitor:

Sony Monitor INF Utility

You may need the other drivers on the above page also depending on what devices you have installed on your computer.

I recommend that you download without using Download Taxi. (Download each driver one at a time).

After you get all of the original drivers installed, check for any updates you may need.

<http://esupport.sony.com/US/perl/swu-list.pl?mdl=PCVRS310&UpdateType=Updates>

Running Microsoft Update will find most of the updates you need.
