I downloaded them all manually one by one. Those which wouldn't work had the following error message:

update\update.exe is not valid Win32 application. 12 of the 87 updates were not downloadable. When I had finished all my downloads manually, I restarted the PC and when it had rebooted, would you believe it did download the error message ones. So so far so good. But I do not understand why this happened.

FYI the 12 error message updates are:

- Security Update for Windows XP (KB944653)
- (KB935839)
- (K943485)
- KB935840
- KB920213
- KB932168
- KB917344 (NOT ENGLISH)
- KB925902
- KB911564
- KB941644
- KB924667
- KB928255

What error number are you getting?

1]Click Start, click All Programs, and then click Windows Update or Microsoft Update.

2]On the Windows Update Web site or on the Microsoft Update Web site, click Review your update history. A window opens that shows all the updates that have been installed or that have failed to install on the computer.

3]In the Status column of this window, locate the update that failed to install, and then click the red X.

A new window opens that displays the installation error code.

Re: Updates fail

4]Note the error number.
