I have a cabled network, and they are connected via a router with built in switch.
Funny, now I cannot see it at all...

sounds like it can't find the media center pc. is that the message you see? how are you connecting this device to your network?

Can configure the DMA2200 without problems (well, might have to re-start the setup a couple of times to detect the extender, but in the end it succeeds). However, everytime I have put the DMA2200 into standby, it restarts the media center setup process (setup key etc.), when I turn it back on, and I have to do everything all over.

I have a XBOX 360 as well, and it jumps right back on Vista Media Center, when switched on.

Any suggestions?
