I see nothing in the title of this forum to imply it is only for MC applications only. And again there is not an easy way for most retail users who purchased the MCE2005 OS to know if the problem they reporting is caused by the modifications made to the XP Pro OS used as the base for MCE2005 if it exists in all versions of XP Pro
Your totally useless post in helping the user solve his problem is not appreciated As a minimum you should offer some suggestions and then tell the user which specific newsgroup to post in especially when the user's original post is in the discussions.Microsoft.com site and not directly in this newsgroup.

This group is for issues with the Windows Media Center application, I don't see how a question on a PHP form is even remotely on topic.

Are you running the MCE 2005 operating system? If yes

Re: Unable to enter data in PHP order form

then I see no problem with your posting here since the problem may be caused by the fact that MCE2005 is based on a modified version of XP pro. If you repost somewhere else based on Jaime's request please let us know in this thread where you posted your problem since my son is having a similar problem.

Well first, you need to repost in a more appropriate newsgroup, this one is for Window Media Center.

I am starting a small home business and I have asked a developer to create an Order Form in PHP. My developer has been using both IE 6 and IE 7 to test the form and he does not have any issues.

When I tried testing the form on my end in IE 7, I was unable to enter some of the fields and see the updates. I have tried re-installing IE 7 on my PC and I have cross-checked my Internet settings with my developers and I have not been able to resolve the issue.

I also tried downloading

Re: Unable to enter data in PHP order form

Firefox and tested the Order
form in that
browser
and it appears to be working
fine. I am not sure why I am
unable to do
the
same in IE 7.

Can someone help me
please? Thank you.
