If you need logon auditing, then ADAM can do this, although it will go into Security log, not IIS log. Just enable Account Logon auditing in the group policy. You will get an event like this one:

Event Type: Success Audit
Event Source: Security
Event Category: Account Logon
Event ID: 680
Date: 2/11/2004
Time: 4:39:03 PM
User: Domain\userName
Computer: ADAM_MACHINE_NAME
Description:
Logon attempt by: MICROSOFT_AUTHENTICATION_PACKAGE_V1_0
Logon account: username
Source Workstation: CLIENT_MACHINE_NAME
Error Code: 0x0

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

For ADAM users, you will get this kind of audit:

Event Type: Success Audit
Event Source: Security
Event Category: Account Logon
Event ID: 680
Date: 2/11/2004
Time: 4:38:06 PM
User: S-1-439939821-1707116567-3694986241-1098450955-1252665478-3949904892
Computer: ADAM_MACHINE_NAME
Description:
Logon attempt by: ADAM_test
Logon account: CN=test,O=msft,L=wa,C=us
Source Workstation: -
Error Code: 0x0

Re: ADAM

For more information, see Help and Support Center at
<http://go.microsoft.com/fwlink/events.asp>.
