Hi all

I have Window 2000 on one server with two NIC:

First NIC assign to valid IP address and valid gateway.

Second NIC assign to VPN with 192.168.0.1 without gateway

Evry time i ping mine zone : mydomain.com it's return 192.168.0.1

I remove 192.168.0.1 from server properties / Interface but every time system show :

(same as parent folder) Host 192.168.0.1

I deleted several time this record but it's appear again.

How can I remove this interface from zone?

BTW: WINS and DHCP work on this server for VPN

how can bind IP to WINS server?

Thanks

Ray
