Cheers for the response Simon.

When you say add IE to the start up menu – do u mean through AD – i know how to do this for each individual pc but what i want to do is do this through AD so I can take it out easily if i need to. If u do mean through AD – where exactly do u find the start up menu – if u could give me directions i would appreciate it very much.

I was going to use a login script but would much prefer to try and move everythign to simple AD, if at all possible.

Thanks for all help.
