I cannot find how to do this anywhere.

I go to Computer Settings->Security Settings -> Restricted Groups

I choose Add Group --- which group gets entered there? Domain Users?

Then I right-click on the newly created Restricted Group. I have 2 more options: Members of this Group and This Group is a Member of. I do not see where I can choose Power Users in any of those options. How is that done?

Can someone please reveal this well kept secret?

Thanks
