Hi

I do not think I follow the connection between certificationAuthority and inetOrgPerson below.

Is certificationAuthority here the RFC2256 class? It's usually a auxiliary class.
(I think it would be an 88-class under AD)

Could you post your ldif file and the full error as reported by the ADAM version of ldifde.

Thanks

Lee Flight

PS for the inetOrgPerson import you might want to look at the MS-InetOrgPerson.ldf file that ships with ADAM by way of comparison.
