Urgent replication is implented as a flag governed by regular old notification-driven replication. Enabling "Change notification" on a site link will facilitate urgent replication but will cause the replication behavior to mimic that of intrasite replication (with the noteworthy exception of FRS).

<http://www.microsoft.com/resources/documentation/Windows/2000/server/reskit/en-us/Default.asp?url=/resources/do>

Look for "To enable change notification between sites"
