Hello,

I want to find "Record Time Stamp" in dnsNode with ADSI editor. But I onlyfound "Modify-Time-Stamp". Is it the same?

Also another question.

My plan is to read the "Record Time Stamp" of dnsNode object and remove those with 2 -week old workstations by a VBscript. Is it a save approach to clean stale records in DNS?

Because of some good reason I do not want to use scavenging (auto/manfully) in DNS console.

Thanks,
Wensi
