If you Google groups for ADAM SetPassword, you will see some of the problems that others have experienced. Probably the most common problem in this area is failing to have a secure channel in place for the password operation. See Security Considerations in the start_here.htm file in the directory where you unpacked ADAM.

If none of those seem to match your problem then please post a snip of your code and tell us on which operating system you are running ADAM.

Thanks

Lee Flight
