I assume that this also applies to XP boxes running the original 2003 adminpak.msi then.

According to the fix this is a bug in the 'find computers tool' of ADUC on Windows 2003 Server.

So any W2K3 server where you use ADUC to find computers will need this fix.

It's happening because of the 'cause' section of the KB883480

It has nothing to do with the domain functional level.
