Hi Everyone

First thanks for help. Both Herb and Gary mention the need of this Adminpak and working from a workstation to get this to work. I must admit that I haven't yet read a article that has mentioned this or actually seen it in several of the Microsoft training books I have looked through. I will have to mention this to one of our instructors who brought it to my attention when he was working through a training manual in preparation for a lab and I know there is no mention in this manual about this. I used the interactive group based on the advise of another network administrator but based on what Ptwilliams has said I can see the problem there.
