Well in some sense yes but you can probably use the Win2003
DSGet command --- it is far more capable than the Net commands.

DSGet user /?

(-email = address seems promising)

You may also need to combine this with a preliminary DSQuery User
to get all of the User names for processing by DSGet.

I.E., DSQuery finds the users, DSGet displays the attributes for a
particular (set of) user(s).

DSQuery user /?

You can also look into the ADSI ScriptOMatic by searching
Microsoft for it....

Google: [site:microsoft.com ADSI ScriptOMatic]

(It helps (non-) programmers write useful scripts.)
