Sure you can. What language are you writing the script in? Here's some information on the iadsuser methods and the requirements. I'm sure other languages would be able to set passwords as well. There's even some sample web based code that comes with the IIS server code. It's under the IISADMPWD information.

http://msdn.microsoft.com/library/default.asp?url=/library/en-us/adsi/adsi/iadsuser_setpassword.asp

Does that help? Let us know what language you're using to read and write the data and somebody may be able to give more relevant code snippets.
