|Conversation: Group assignments and security rights?  
|Subject: Group assignments and security rights?

|  
|Hi,

|Running AD, one DC is Windows 2000 Server and the other is  
|Windows 2003 Server. I'm new to this company so didn't setup  
|the network. They have a number of user groups defined and  
|I'm trying to figure out what they do, no one here knows a  
|thing apparently since the network was setup by various  
|contractors of time.

|My question is, how can I tell what a group is used for? I  
|can see who belongs to the group but how do I track down which  
|folders the group is assigned to, is there some utility that  
|gives me this information?

|Thanks in advance,  
|Linn

|Maybe you can use:  
|showacls – ResKit  
|acesenum – sysinternals
