Morning, Paul!

Quick question: should it be the 'Everyone' group or the 'Authenticated Users' group? And, when denying access this way one could 'allow' the READ but specially 'deny' the APPLY GPO. Not sure what purpose this would have but I remember some really smart people in the WIN2000 Group Policy news group suggesting this.

Also, is it not a smart idea to not include this in the Default Domain Policy but to create a new GPO linked to the Domain level? Or, possibly to an other OU? We do not know what his set up is.....This is what I would probably do. I would tend to think that it might be a good idea to leave the DDP and the DDGP alone....If you have to restore them via those nifty little utilities you have lost everything other than the factory defaults. Or, am I wrong on this?

Create the gpo and give the everyone group the read and apply. Create a group of users that don't need it applied and add this group to the gpo and deny them the right to read or apply the gpo.

Hello everyone.

I'm having a tough time figuring this out. I need to be able to enable a password protected screen saver to apply to the entire domain with the exception of a few user accounts and a couple of computer accounts and cannot get it functioning properly.

I can setup the Default Domain Policy to enable the protected screen saver, but for the life of me cannot figure out how to exclude the user accounts and computer accounts I need to.

Any help is grateful!

Thanks,

Mike
