Hi,

I am facing problem on a User Login.

When a user login on domain account or local account on a Windows 2000 professional machine it takes very long (10-15minutes) to loggon. machine is a part of Single Domain Enviornment.

What can be the problem as System is Original IBM Desktop withPp-IV 2.8gz processor and 1GB RAM. Software loaded are limited only Office2003,Adobe Acrobat, etc

Thanks
