Hi

of course it's NTFS. as i mentioned earlier ,i can see security tab in drive properties and also in chiled folders properties page. the problem is only on the folders shown in drives, i mean the first ones after i open a drive .

I also want to tell you that this issue is go away if i open one of the main folders in a drive, and the get properties by right-clicking in the middle of the explorer page!!!!

Thanks for your response.

Hi guys,

i recently removed a second AD from one of my servers to make it a member server, but now i noticed that security tab is missing on folders . i can see security tab when i get properties from disc drives.

any ideas?
