Hi

Check if it helps:

Delegation and policy-related permissions

<http://technet2.microsoft.com/WindowsServer/en/Library/53769684-2a36-46b2-8fd9-ae009b58306f1033.mspx?mfr>

We have an Active Directory in List Object Mode to control who can view specific objects. When working with list object mode, does anyone know the absolute minimum OU permissions a user needs in order to apply a group policy that is linked to that OU? When the user only has "List Object" permissions, he/she does not apply the group policies linked to the OU; however, if the user has "List Object" AND "Read All Properties" the group policy is applied.

"Read All Properties" is more access than we would like to give the users to this particular OU, so we are trying to find the actual permissions to the properties of the OU that are required. I thought it would be enough to give the user "Read gPLink" permissions; however, that does not seem to be enough.

Re: What is the Minimum OU ACE Required to Apply a Group Policy?

Any guidance is appreciated.
