Hi, Danny

Just to clarify..

In other words my new policy will ONLY be in effect if the current user password is up for renewal..Correct ?? If it is then the new policy will then take effect.. ?? If not i imagine they will continue working the old password policy until their password is up for renewal..correct??.

Darren

Would the new policy take effect immediately prompting user to change their password.

If you were to set a 90 limit on the passwords, accounts that have passwords over 90 days would be required to change and abide by the new policies. Passwords under 90 days would not be affected until they reach 90 days.

Greetings everyone,
I need to implement a new password policy for in Win2003 AD environment however my concerns are what will be the result when users login next day . Would the new policy take effect immediately prompting user to change their password. My current domain policy consist of 6 chars min I would like to implement 8 chars min ..

Thanks
Darren
