well, according with Frank Röder

to active directory manually.

Navigate to:

[HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\ProductOptions]

Change "ProductType"="LanmanNT" to "ProductType"="ServerNT"

Restart the server. Delete the NTDS Folder.

This way is not supported by Microsoft!

Hello Jorge,

thanks for your help, demotion and Cleanup are possible
because are in
DC1, but, how can I change my DC2 into a single PC
pertaining to domain,
I mean, I can't demote DC2 neither change from domain,
because in its
properties appears with *unknown* domain, and doesn't have
any option to
change it.

Do you know a command in order to remove it from current
domain

Thanks .

Hi

Disconnect the 2nd DC from network.

then perform metadata cleanup:
How to remove data in Active Directory
after an unsuccessful domain
controller demotion

<http://support.microsoft.com/?kbid=216498>

Clean up server metadata

<http://technet2.microsoft.com/WindowsServer/en/Library/012793ee-5e8c-4a5c-9f66>

You need to manually remove the DC from
Active directory and Sites.

Re: How to delete Active Directory in DC2

news:OW1V4bYIGHA.3344@xxxxxxxxxxxxxxxxxxxxxxxxxxxx

Hi, my 2nd. DC fails,
doesn't have any FSMO
neither GC, just AD.

Now, when start shows the
follow message:

lsass.exe – Error del sistema
Error de inicialización del
Administrador de cuentas de
seguridad por
el
siguiente error: No se puede
iniciar el servicio de
directorio. Estado
del
error: 0xc00002e1. Haga
click en aceptar para apagar
este sistema y
reiniciar en modo a prueba
de errores, vea el registro de
sucesos para
información más detallada.

And, when before goes
shutdown sends its last
message:
"Active Directory está
generando los índices", but
nothing happens in
next reboot.

How can I demote it, I tried
with GUI, later with
dcpromo
/forceremoval but nothing
help, when I review it PC
properties appears
without domain joining, just
shows *Desconocido* (it
means *unknow*).

Note: I forget my last
backup state, it runs Win2k3
R2. thanx.
