Hi  
 ehehehe  
 Sounds like your article isn't so good or he need new glasses, or he didn't bother to take a llok at you article.

are you talking about the user profiles or user accounts?

have a look at:

<http://blogs.dirteam.com/blogs/jorge/archive/2006/05/16/981.aspx>

by the way: don't disable replication for too long!

When setting permissions in the security tab,  
after enabling Advanced  
Features in the View menu, on most of my  
profiles the permissions  
stick.

However, two of my users revert back to  
their original security  
permissions  
after a file replication. I have no GPO in

Re: Security Permissions revert to default

effect. I have to DCs, but  
the  
changes are being made on the primary DC.  
I have also disabled file  
replication on the secondary DC, so I don't  
know why it would replace  
permissions on the primary. Plus, like I said,  
only these two profiles  
revert. Any ideas?
