These would need to be created as contacts, yes.

Hi Laura, I failed to mention none of the email addresses are part of our domain. Can this still be done with a third party tool, or will I need to create AD contacts for each address, then add them to the DL?

"Laura E. Hunter [MVP]" wrote:

Use dsmod (from the Windows Support Tools) or adfind (from [www.joeware.net](http://www.joeware.net))

```
dsmod group "CN=US INFO,OU=Distribution Lists,DC=microsoft,DC=com" -addmbr "cn=User1,dc=domain,dc=com" "cn=user2,dc=domain,dc=com"
```

or

```
admod -b "CN=US INFO,OU=Distribution Lists,DC=microsoft,DC=com" "member:++;cn=User1,dc=domain,dc=com;cn=user2,dc=domain,dc=com"
```

The Technet Script Repository probably also has a VBScript solution as well.

(Just google those three words, you'll go right to it.)

HTH

I have Exchange 2003 on Server 2003, and I need to create a new email distribution list in AD for our company news letter. I have at least 200 addressess that will need to be made members of this DL. I have all the addressess in a word document. Is there a way to easily import these addressess into the DL, or do I have to type in each one by hand?
