Joe's is about \$35 and it is a very good book. The \$600 will assist those that have an understanding and a large environment. From what I see you aren't clear on your environment so the \$600 spent will not provide what you need.

Buy Joe's book, it is worth it.

Hi Alan

There is a solution out there that will really simplify this process and provide you with more control of your network. I found this whilst looking for software to backup Active Directory with ability to restore single items like 1 account or even OU. I would recommend that you have a look its called Active Administrator

http://www.download.com/Active-Administrator/3000-2651_4-10538587.html?tag=lst-0-2

Thanks
Anthony

Yes, you should first get an understanding of AD, see the book in the signature of this message. Then once you understand the concepts of delegation etc, then look at the Microsoft Delegation Whitepaper for specific examples. Make sure you understand the lowlevel concepts first

Re: Edit MS Active Directory

though or else you will probably screw it up.

Hi

I am very new to the posting on the web; I am looking for some help with security within our corp. network. We are looking to remove a lot of permissions on our office network and want to remove the admin permissions to a lot of servers.

What I need to do is to allow Helpdesk Team ability to log on and have ability to create, change and reset user account passwords.

Is this possible?

Also is it possible to allow the Helpdesk group to modify current groups and users' permissions without them being assigned as a domain admin?

Thanks in advance

Alan
