Hello,

I would like to create an automatic signature in Outlook for outgoing messages for our 25 users, giving them a standard signature (taking there name & job title from active directory, in aq specific fonts and policy). We use Outlook 2003 & Windows 2003 AD. do you know how to do that ? how to use group policy to manage signature for all employees ?

No, i can't be done with GPO, You have to deploy some software which will add this to outgoing mail.
