Do you want account expiration or password expiration? I will assume password expiration.

OLDCMP tool will do this, though it gives more than just those pieces of info. You can output to CSV and then filter what you want out.

ADFIND can get the info but instead of giving you when the account will expire it will give you when the password was set (password expiration isn't listed in AD, password last set is). The attributes are whenCreated and pwdLastSet.

I also have a DCR for findexacc to add additional attributes to the output, not sure when I will get that modified.

Hello All,

I am looking for a free tool (command line or GUI) that can list all users in AD and provide me with two peaces of information:

1. when the account will expire
2. when the account was created

If I need to post this in the scripting forum sorry for the miss-post. I have found several command line utilities; dsget and the tools at joeware.net that can provide the expiration date but only for a specific user if given. I need something that can list out all the users in a

Re: Account expiration and creation dates

Domain. Maybe I missed something with these tools or didn't properly use them if this is the case if someone could let me know what the proper syntax would be that would be great.

Thanks for your time in advance!
