Not yet. We are aware of this request, and we are hearing it more often. I'll try to get it in. No promises though...

AD definitely supports this. I've never been able to get a straight answer on what you can do in this regard with ADAM. My guess is that you can't do this with ADAM users (which is probably what you want).

I've actually gotten the product team to agree to document this stuff a few times over the last year or so, but it still hasn't happened. If you find out something, I'd love to hear it!

Is it possible to bind to ADAM using client-server certificate authentication, instead of a simple bind over SSL? Are there any special settings that need to be configured for ADAM to enable this, above and beyond the normal procedures to configure ADAM for LDAP over SSL?

Re: Client Certificate Authentication with ADAM

Thanks.
