Hello, If Auditing wasn't configured properly during the moment this doesn't going to help this time, but here is a few resources on how to configure auditing and tacking of changed in Active Directory:

Audit Policy

This module describes how to set different settings that apply to auditing. It also provides an example of audit events created by several common tasks.
<http://www.microsoft.com/technet/security/guidance/secmod50.mspx>

Microsoft Security: Threats and Countermeasures Guide – Audit Policy

An audit log records an entry whenever users perform certain actions that you specify. For example, the modification of a file or a policy can trigger an audit entry.

If your security log does not over write as quick as the one I have, I would suggest looking in the DC security Log for Event ID 630. Thsi will detail the account that was deleted as well as the caller ID.

I have several administrators who can create and delete users in my 2003 native system. Late yesterday one of them deleted a upper level managers account. I need to find out who deleted the account.

Thanks.

Fred
