You may have a Deny ACL that prevents the Allow ACL?

Did you tried my suggested dscls command?

Yes I did...

I selected one user, in "Apply on to" I select "User objects" and click property :

Read and write Phone and mail options.

And it still can not ??

Hello

You can modify the security within AD Users and Computers by first click the View menu and select advanced mode. Right Click the particular OU where you what the delegation to take place, Click the Security Tab, Click Advanced and grant a security principal (users, group, computer) Read and Write object to the mail attribute and have it applied to child objects, or only to user objects if you only want to delegate the ability to modify the mail attribute on user accounts.

You can also use the command line based tool dscls with the following

Re: Delegating control

syntax:
dsacls "<ContainerPath>" /I:S /G "<domain>\<alias>:RPWP;mail;user"

Please help :)

I want to set delegation for one user who must enter email
addresses in
active directory account, but only that.

Email adressess are in "General" tab of account properties
and even I set
delegation with "Delegate Control wizard", then set that this
user can Read
and write General properties USER can not write on column
Email.

Thanx in advanced

Igor
