What attribute were you trying to modify when this happened? Are all of the attributes you are modifying in the list returned when you do a base search for the attribute "allowedAttributesEffective"? That is a special constructed attribute in AD and ADAM which tells you which attributes the currently bound security context can modify. You can also find all of the attributes defined for the current class with the allowedAttributes attribute.

I'm not sure of a way with logging that you can find out the attribute in question, although that might be something you can get via auditing.

"deanhiller" <deanhiller.2g82qb@xxxxxxxxxxxxxxxxxxxxxxxxxxxxx> wrote in message news:deanhiller.2g82qb@xxxxxxxxxxxxxxxxxxxxxxxxxxxxx

I am getting this error as I see all over the place....

LdapException: LdapException: (16) No Such Attribute
LdapException: Server Message: 00000057: LdapErr: DSID-0C090B3D,
comment: Error
in attribute conversion operation, data 0, va28

but I can't find a way to debug the error. In IPlanet and other ldap stores, I look at log files that tell me which attribute is having problems. How do I do the same in ADAM??????

thanks,
dean
