I'm not sure if this is the same, but do the files below the folder change?
The reason I ask is I have experienced this but it isn't necessarily what you think?

See the link and see if this relates to your issue.

Hi all,

we're in a Windows 2003 environment. The check-mark for the inheritable permissions is getting un-checked for the users even though, I made the check-mark earlier. If you go to the AD > User Properties > Security tab > Advanced > under the Permissions tab, I put a check-mark next to "Allow inheritable permissions from the parent to propogate to this object and all child objects. Include these with entries explicitly defined here."

Why does the check-mark keeps disappearing after like 20 min.? Any ideas?

Please let me know. Thank you!
