Hi

as far as I know userProxy from a trusted forest is OK.
Some background:

http://groups.google.co.uk/group/microsoft.public.windows.server.active_directory/browse_thread/thread/f8b1c593ec4

Hello, guy
We use ms-userproxy in ADAM.
We use ADAM to "forward" user authentication (windows logon) on 2 Domain
Trusted (Historical implementation).
Now We must integrate a new forest with 5 child domains.
We think to just made a Forest trust relationship in first,
Because it is more easy than 5 domain trusted.

If We will choose a Forest trust,
Is it possible to use ms-userproxy to forward User authentication to child
domain ?
I think Yes...
But what is the attribute to be set in this case to permit this ?
Same like a domain trusted ?

Thanks for your help
Eric
