Hello,

Somewhat of a newbie here with Delegation of Control. I've ran the delegation of control wizard and assigned the group of people that I want setup to reset password for user accounts. Now comes the question; How do I give them access to active directory from a remote pc to make changes without installing the full blown administrative console? I have the administrative console for my pc that includes tools for "sites and services" and "active directory domain and trusts" but I really dont want them to have all these tools as an option. They are local administrators on there computer but I only want them to have a shortcut to the active directory users and computers tool and only be able to make changes based on the delegation that I have given them. Thanks in advance for any comments, solutions and suggestions.
