Thanks paul. We're just searching an OU for all users, using a UNIX command called ldapsearch.

Paul Williams [MVP] wrote:

I can't help based on your current syntax. Although I think I can make out your command, whether or not the client chooses to page is a client thing. Generally, client software is configured to page, so I would imagine it already is. But I shouldn't speculate as I've never really used Unix. Maybe you have to enable such a thing?

Can you provide additional usage information for the syntax so that we might be able to assist? What are you using to perform this query?
