Hi

By default evryone has read-access to AD.

To deny that right you must create a security group and deny read permission, then add the users to that security group.

We are currently implementing MOSS2007.

However if a user is trying to add users and he looks up users in

Active Directory, then he can see all users in Active Directory.

How can you limit a user within an Organizational Unit so he can only

search for users within his OU?

We have:

DC=domain, DC=com

OU=companyA, DC=domain, DC=com

OU=companyB, DC=domain, DC=com

OU=companyC, DC=domain, DC=com

Ideal scenario would be that users from OU=companyA can only search within their OU=companyA, and cannot see users in the other OU's.
