Danny, thanks for the help. I ran the dfsutil /PurgeMupCache and it resolved the issue.

I found it using on of the many forums online. ;-)

Regards.

I have. And I have attempted various of the recommendations. before I try anything else and potentially screw things up, I am looking for someone who has experienced and/or resolved this before.

if those folks dont exist, I am OK with this post being abandoned.

Thanks.

Danny, I just verified, and one of my DCs has been upgraded to SP1. Same issue.

Re: AD Upgrade

The

one thing I do not have as  
per one recommendation is  
SP1 on the  
server.

Apply SP 1. It may solve the problem. If not  
then get back with the  
error messages.

It is entirely possible no one has seen or  
remembers seeing that error  
because most everyone is on SP1.

Hey Guys, after upgrading  
my DCs to 2003, I am  
getting a bunch of 1058  
and 1030 errors:

Windows cannot access the  
file gpt.ini for GPO  
CN={31B2F340-016D-11D2-945F-00C04FB984F9},CN=Policies,CN=Sys  
name>,DC=com. The file  
must be present at the  
location <\\<domain  
name>\sysvol<domain  
name>\Policies\{31B2F340-016D-11D2-945F-00C04FB984F9}\gpt.ini>.  
(<error description>.).  
Group Policy processing  
aborted.

I am have tried the  
GrantPermissionOnAllGPOs.wsf  
but have seen no  
relief. I have checked for  
most things I have found on  
MS KB site and  
by searching around. MY  
DC seem setup properly  
with all relevant  
services running. The one  
thing I do not have as per

Re: AD Upgrade

one  
recommendation is SP1 on  
the server.

Please advise.

Thanks in advance.
