Correct me if I'm wrong, but don't you have to extend your AD Schema to support Windows Server 2003 before you can introduce W2K3 Enterprise CA's into your environment?

Have you tried this? Maybe someone else out there can tell me if I'm right about this or not.

Hello, we are running a mix of W2K and W2K3 servers. I am trying to install a Enterprise Root CA on one of my W2K3 servers. When I do, I can only install a Stand alone Root CA. If I go to one of my W2K servers, I CAN install a Enterprise Root CA.

Is this normal behavior?

How can I install a Enterprise Root CA on a W2K3 server in a mixed mode environment?

Anyone?
